(54) Title: METHOD OF SEARCHING FOR MEDIA OBJECTS

(57) Abstract: A method of searching for media objects is described, in which, in order to establish degrees of correspondence (UG) between a search request (SA) and selectable media objects, at least one feature (i1, d1, d11, d12) of the search request is compared with at least one feature of the selectable media objects, in which the search request comprises at least one representation-describing feature (d1), and in which a search result based on the degrees of correspondence (UG) is organized. In addition, a corresponding system of searching for media objects is described.
